REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 16 and 18, the Examiner agrees with Applicants' argument that the prior art of record does not disclose or fairly suggest a duplexer or electronic apparatus having every one of the claimed features, and especially having the feature "the chip having pads located further out than the resonators in the SAW propagation direction" (see claims 16 and 18, the last two lines thereof). The Examiner agrees that the prior art shows only pads further out than the resonators in a direction perpendicular to the SAW propagation direction. An additional search for the newly recited feature only yielded other references that clearly show pads located further out than the resonators in a direction perpendicular to the SAW propagation direction (see reference cited below).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ikada U.S. 6,369,672 discloses two SAW ladder filters on a substrate with the resonators side by side in a SAW propagation direction (i.e. up and down in Fig. 14), but

the pads on the chip are not further out than the resonators in the up and down/SAW propagation direction.

Taniguchi U.S. 6,943,645 shows two SAW ladder filters and a phase matching line on a chip (Fig. 5) with the resonators of the filters side by side in the SAW propagation direction (up and down in Fig. 5), but the pads are clearly shown further out from the resonators only in the left to right direction that is perpendicular to the SAW propagation direction.
